2-ROLLER HEADS

In response to market demand, Logset has expanded its head range with new 2-roller models. All Logset TH-2 series heads are equipped with four movable delimbing knives. The four-knife design supports the stem securely and centers the tree accurately in the head. The head is dimensionally accurate and easy to calibrate. Diameter measurement is performed from the top delimbing knives, providing superior accuracy. The simple construction offers clear advantages in productivity for thinning, when working with difficult timber, and for bunch processing. A bunching attachment is available as an option for all Logset harvester heads.

REDUCED OIL CIRCULATION
= LOW CONSUMPTION
