

FORWARDERS

NEW BOGIES - NEW TRACTION

The new NAF HD-series bogies deliver 7% more tractive power and a stronger, longer-lasting drivetrain. Brakes are also more effective and durable, offering increased braking force and improved cold-temperature performance. Oil changes have been made easier with a drain plug located at the bottom of the bogie.

The king pins are the components that experience the highest loads in the pivot joint. With a sealed steel bushing design, the king-pin assembly becomes an extremely robust and durable solution. The bushings do not deform, and the sealed construction prevents external debris from entering and causing component wear.
